

# Course Tips 2023

**The best way to start this course – begin reading in the Course Materials.**

- Going through each Lesson will help you build the task components.
- Read each Task Requirements section for guidelines to each component.
- You should complete & pass Task 1 before submitting your 2nd Task.

See details on completing the Tasks in the [Course FAQs and Examples](#) page.  
Accessible from the **Course Tips** menu.

## **Task 1**

Submissions may be returned from evaluation for various reasons, here are some suggestions:

- Make sure your Persona profile includes biographical information and photo from the Survey;
- Wireframes should contain a suggested flow of navigation through your site;
- Feedback and Changes document should contain detailed information;
- Prototype should be uploaded as a URL accessible in a browser window;
- Include 5 Usability Tasks for review purposes (see examples online at link below).

Take a look at the [Task 1 example files](#) available on the OneDrive for reference, these are formats previously accepted for the task. **(use WGU credentials to log in).**  
Accessible from the **Course Tips** menu.

## **Task 2:**

In Task 2 you will refine your prototype for usability and review other students' work using Panopto.

- Watch the [video demo](#) on reviewing other student's prototypes using Panopto.
- If you don't have a Panopto account, review the [Panopto FAQs](#) to get started.
